

Data Engineer with expertise in building robust data pipelines and experience in Big Data, software development, and BI visualizations.

EDUCATION

Manipal Institute of Technology, B.Tech in Computer & Communication Engineering (Minor: Big Data Analytics)2020—2024

Coursework: Data Structures, OOP, Cloud Computing, Operating Systems, Database Systems, Information Security, Computer Networks, Software Design Technology, Data Mining and Predictive Analysis, Design and Analysis of Algorithms.

TECHNICAL SKILLS

Programming Languages	SQL, Python, Java, C/C++
Data Engineering	Databricks (SparkSQL), Greenplum (PostgreSQL), Airflow, Talend, DBeaver, Github, Data Migration, CI/CD, Medallion Architecture, ETL Pipelines, Orchestration
Data Visualization & BI	Power BI, Tableau, DAX, Excel
Frameworks & Web Technologies	Spring Boot, Hibernate, JDBC, JPA, RESTful APIs, HTML, CSS
Developer Tools & Environments	Postman, MySQL Workbench, SQL Plus, RapidMiner, Android Studio, Visual Studio, Cisco Packet Tracer

WORK EXPERIENCE

Data Engineer | Genpact, BengaluruOctober 2024—Present

SparkSQL, Databricks, Airflow, VSC, Talend, GitHub, Dbeaver

- Migrated 200+ data objects from **Greenplum to Databricks** Medallion architecture by developing SparkSQL based PXF/reverse-PXF connectors, views and DDL scripts, integrating data from multiple enterprise sources including S3, Oracle, Smartsheet, and Box.
- Re-engineered Talend TAC workflows into Airflow DAGs to automate data ingestion and outgestion pipelines, integrating CI/CD via GitHub YAML scheduling and configuring metadata in DBeaver.
- Conducted log-based root cause analysis (RCA) for error resolution, ensuring 98%+ data accuracy across all domains.

GenAI Intern | Genpact, BengaluruFebruary 2024—July 2024

Python, NLP (NLTK, TF-IDF, Sentence Transformers), ML (Affinity Propagation), GPT-3.5-Turbo

- Engineered an **AI-powered Document De-Duplication & Consolidation** system with NLTK for text preprocessing and TF-IDF for vectorization.
- Applied Affinity Propagation clustering for .docx files, Sentence Transformers with cosine similarity (0.70 threshold) for duplicate removal.
- Achieved an average 54.56% reduction in document length with 0.97 semantic similarity through GPT-3.5-Turbo-based text refinement.

Power BI, Excel, Python, Machine Learning, DAX, SQL

- Developed a real-time **Vehicle Financing Performance Dashboard** using Power BI and Excel for integration, visualization, and KPI tracking.
- Leveraged Python and ML models for 85% accurate predictive analytics, applying DAX and SQL for data cleaning and feature engineering.
- Achieved a 20% increase in loan approvals and a 25% reduction in loan defaults, improving overall decision-making and strategic planning.

Software Development Intern | NMBR Systems Private Limited, BengaluruJune 2023—July 2023

Java, Spring Boot, SQL

- Built a Java/Spring Boot-based management system integrating a MySQL database and REST APIs, using Postman for testing and validation.
- Implemented optimized SQL queries and JPA/Hibernate-based ORM for efficient CRUD operations and enhanced data management.
- Designed interface logic using Java Stream API to optimize data workflows and improve software performance.

Web Development Intern | D’Souza Metal Cutting Private Limited, MumbaiJune 2022—Aug 2022

HTML, CSS

- Developed a responsive and intuitive UI for a PDF invoice generation application using HTML and CSS.

PROFESSIONAL CERTIFICATIONS

- Databricks Certified Data Engineer Professional
- Databricks Certified Data Engineer Associate
- Academy Accreditation - Generative AI Fundamentals

TECHNICAL PROJECTS

Supply Chain Management Platform | Java, Spring Boot, SQL, HTML, CSS, SolidityJuly 2024

- Engineered a full-stack platform featuring blockchain-based authentication with Ethereum and Solidity smart contracts.
- Implemented RESTful APIs with Hibernate and JDBC for efficient MySQL data integration, validating functionality through Postman testing.

Data Mining and Analysis: Analysis of Crime in India | PythonNov 2023

- Built a Crime Analysis Model using Indian crime data (2001-2010) with K-Means and DBSCAN clustering algorithms to analyse data attributes.
- Evaluated algorithm efficiencies with Silhouette scores, providing actionable insights for law enforcement.
